V Semester		
B. Tech. (Computer Science & Engineering)		
5CS4-01: Operating Systems		
<b>Credit: 3</b>	<b>Max. Marks: 100 ( IA:30, ETE:70)</b>	
<b>3L+0T+ 0P</b>	<b>End Term Exams: 3 Hours</b>	
<p><b>Course Objectives:</b> As a result of successfully completing this course, students will:</p> <ul style="list-style-type: none"> <li>• Learn about how Operating System is Important for Computer System.</li> <li>• Learn about different types of Operating Systems and their services.</li> <li>• Learn different process scheduling algorithms and synchronization techniques to achieve better performance of a computer system.</li> <li>• Learn about device and device management.</li> <li>• Learn about the concept of memory management and virtual memory.</li> <li>• Learn about the concept of file system.</li> </ul>		
<p><b>Course Outcomes:</b> Upon successful completion of the course the students will be able to</p> <p><b>CO-1:</b> Analyze basic concepts of operating systems and their structures.</p> <p><b>CO-2:</b> Analyze various issues related to inter-process communication like process synchronization and critical section.</p> <p><b>CO-3:</b> Synthesize the concepts of I/O management, file system implementation, scheduling, resource management and deadlocks.</p> <p><b>CO-4:</b> Interpret the issues and challenges of memory management.</p> <p><b>CO-5:</b> Understand protection and security issues related to the operating system.</p>		
S. No.	Contents	Hours
1	<p><b>Introduction to OS and Process Management:</b>                      Introduction to operating systems, operating system structure, system calls, Process concept, Operations on processes, cooperating processes, inter process communication, mutual exclusion, critical section problem, Synchronization hardware, wait and signal procedures, Semaphores, Classic problems of synchronization, critical regions, Monitors, process scheduling and algorithms, threads, multithreading.</p> <p><b>CPU Scheduling:</b> Scheduling criteria, Scheduling algorithms, Multiple processor scheduling, Real time scheduling</p>	9
2	<p><b>Memory Management:</b>                      Background, Swapping, Contiguous memory allocation, Paging, Segmentation, Segmentation with paging. Virtual Memory, Demand paging, Page replacement policies, Allocation of frames, Thrashing, case study.</p>	8
3	<p><b>Deadlock and Device Management:</b>  <b>Deadlock:</b> System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection, Recovery from deadlock.  <b>Device management:</b> devices and their characteristics, device drivers, device handling, disk scheduling algorithms, Swap space management.</p>	9
4	<p><b>File Systems and Its Implementation:</b>                      File System Interface, File concepts, Access methods, Directory structure, File system mounting, Directory implementation, Allocation methods, Free space management – efficiency and performance, recovery, log structured file systems</p>	7
5	<p><b>Protection and Case Studies:</b>  <b>Protection:</b> Goals of protection, Principles of protection, Domain of protection, Access matrix, Implementation of access matrix, Access control, Revocation of access rights, file security, user authentication</p>	7

**BIKANER TECHNICAL UNIVERSITY, BIKANER**  
**बीकानेर तकनीकी विश्वविद्यालय, बीकानेर**  
**OFFICE OF THE DEAN ACADEMICS**

<i>Case Study:</i> Linux Operating System Linux history; Design principles; Kernel modules; Process management; Scheduling; Memory management; File systems, Input and output; Inter-process communication, Case studies of Real Time and Mobile OS.	
<b>Total</b>	<b>40</b>
<b>Suggested Books:</b> <ol style="list-style-type: none"><li>1. Silberschatz, Galvin, and Gagne, “Operating System Concepts”, Wiley India Pvt Ltd.</li><li>2. Modern Operating Systems, Andrew S. Tanenbaum, Herbert Bos, Pearson Education India; Fourth edition 2016. ISBN-13:978- 9332575776</li><li>3. Operating Systems: Internals and Design Principles William Stallings, Pearson Education India; 7 edition (2013). ISBN-13: 978-9332518803</li><li>4. Gary Nutt, “Operating Systems”, Third Edition, Pearson Education</li><li>5. V Semester		
B. Tech. (Computer Science & Engineering)		
5CS4-02: Computer Organization and Architecture		
<b>Credit: 3</b>	<b>Max. Marks: 100 ( IA:30, ETE:70)</b>	
<b>3L+0T+ 0P</b>	<b>End Term Exams: 3 Hours</b>	
<p><b>Course Objectives:</b>            As a result of successfully completing this course, students will:</p> <ul style="list-style-type: none"> <li>• Learn the principles of computer organization and basic architectural concepts.</li> <li>• Understand the basics of instructions sets and their impact on processor design.</li> <li>• Demonstrate an understanding of the design of the functional units of a digital computer system.</li> <li>• Evaluate cost performance and design trade-offs in designing and constructing a computer processor including memory.</li> <li>• Design a pipeline for consistent execution of instructions with minimum hazards.</li> <li>• Recognize and manipulate representations of numbers stored in digital computers.</li> </ul>		
<p><b>Course Outcomes:</b>            Upon successful completion of the course, students will be able to</p> <p><b>CO-1:</b> Study of the basic structure and operation of a digital computer system.  <b>CO-2:</b> Analysis of the design of arithmetic &amp; logic unit and understanding of the fixed point and floating point arithmetic operations.  <b>CO-3:</b> Implementation of control unit techniques and the concept of Pipelining.  <b>CO-4:</b> Understanding the hierarchical memory system, cache memories and virtual memory.  <b>CO-5:</b> Understanding the different ways of communicating with I/O devices and standard I/O interfaces.</p>		
S. No.	Contents	Hours
1	<b>Introduction:</b> Objective, scope and outcome of the course.	<b>1</b>
2	<b>Register Transfer and Micro-operations:</b> Register Transfer Language (RTL), Bus and Memory Transfers, Arithmetic Micro-Operations, Logic Micro-Operations, Shift Micro-Operations, Arithmetic Logic Shift Unit (ALU).	<b>9</b>
3	<b>Basic Computer Organization and Design:</b> Instruction Codes, Computer Registers, Computer Instructions, Timing and Control, Instruction Cycle, Register-Reference and Memory- Reference Instructions, Input-Output and Interrupt, Design of Basic Computer.	<b>8</b>
4	<b>Central Processing Unit:</b> General Register Organization, Stack Organization, Instruction Format, Addressing Modes, Data Transfer and Manipulation, Program Control, Reduced Instruction Set Computer (RISC) and Complex Instruction Set Computer (CISC).	<b>8</b>
5	<b>Pipeline and Vector Processing:</b> Flynn's Taxonomy, Parallel Processing, Pipelining, Arithmetic Pipeline, Instruction Pipeline. <b>Computer Arithmetic:</b> Signed Magnitude Binary Numbers - Addition and Subtraction, Multiplication- Booth Multiplication Algorithm, Array Multiplier, Division Algorithm.	<b>8</b>
6	<b>Input-Output Organization:</b> Input-output Interface Modes of Transfer, Daisy Chaining Priority, Direct Memory Access (DMA), Input-Output Processor (IOP)- CPU-IOP Communication. <b>Memory Organization:</b> Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory, Virtual Memory.	<b>8</b>
<b>Total</b>		<b>42</b>

B. Tech. (Computer Science & Engineering)		
5CS4-03: Computer Networks		
<b>Credit: 3</b>	<b>Max. Marks: 100 ( IA:30, ETE:70 )</b>	
<b>3L+0T+ 0P</b>	<b>End Term Exams: 3 Hours</b>	
<p><b>Course Objectives:</b>            As a result of successfully completing this course, students will:</p> <ul style="list-style-type: none"> <li>• Become familiar with layered communication architectures (OSI and TCP/IP models).</li> <li>• Understand different services offered by various OSI and TCP/IP model layers.</li> <li>• Understand the client/server model and key application layer protocols.</li> <li>• Understand the concept of unreliable data transfer and its role in communication.</li> <li>• Understand the concepts of reliable data transfer and how TCP implements these concepts.</li> <li>• Know the principles of congestion control and trade-offs in fairness and efficiency.</li> <li>• Understand the role and concept of routing in communication.</li> <li>• Understand the basics of error detection, including parity, checksums, and CRC.</li> <li>• Familiarize the student with current topics such as security, network management, sensor networks, and/or other topics.</li> </ul>		
<p><b>Course Outcomes:</b>            Upon successful completion of the course, students will be able to</p> <p><b>CO-1:</b> Understand basic computer network technology.</p> <p><b>CO-2:</b> Understand OSI and TCP/IP reference model and working of each layer of these reference models.</p> <p><b>CO-3:</b> Obtain the skills of subnetting and routing mechanisms.</p> <p><b>CO-4:</b> Address design and implementation aspects of various essential network protocols and its integration into network-based applications.</p>		
S. No.	Contents	Hours
1	<p><b>Introduction:</b> history and development of computer networks, networks topologies. Layering and protocols. OSI and TCP/IP Protocol Stacks, Basics of packet, circuit and virtual circuit switching.</p> <p><b>Physical Layer:</b> Guided Transmission media: twisted pairs, coaxial cable, fiber optics, Wireless transmission.</p>	<b>6</b>
2	<p><b>Data link layer:</b> Design issues, framing, Error detection and correction. Elementary data link protocols: simplex protocol, A simplex stop and wait protocol for an error-free channel, A simplex stop and wait protocol for noisy channel. Sliding Window protocols: A one-bit sliding window protocol, A protocol using Go-Back-N, A protocol using Selective Repeat, Example data link protocols. Medium Access sub layer: The channel allocation problem, Multiple access protocols: ALOHA, Carrier sense multiple access protocols, collision free protocols. Wireless LANs, Data link layer switching, Ethernet bridging.</p>	<b>8</b>
3	<p><b>Network Layer:</b> Design issues, Routing algorithms, shortest path routing, Flooding, Hierarchical routing, Broadcast, Multicast, distance vector routing, link state routing, Congestion Control Algorithms, Quality of Service, Internetworking, Fragmentation, The Network layer in the internet, IP addressing, IPv4, IPv6. CIDR, NAT, Basics of IP support protocols (ARP, DHCP, ICMP)</p>	<b>8</b>
4	<p><b>Transport Layer:</b> Transport Services, Elements of Transport protocols, Connection management, Error and Flow Control, Congestion Control, TCP and UDP protocols, Sockets.</p>	<b>7</b>
5	<p><b>Application Layer:</b> Domain name system, Electronic Mail; the World Wide Web, HTTP,</p>	<b>7</b>

V Semester		
B. Tech. (Computer Science & Engineering)		
5CS4-04: Cloud Computing and DevOps Tools		
<b>Credit: 3</b>	<b>Max. Marks: 100 ( IA:30, ETE:70 )</b>	
<b>3L+0T+ 0P</b>	<b>End Term Exams: 3 Hours</b>	
<p><b>Course Objectives:</b> As a result of successfully completing this course, students will:</p> <ul style="list-style-type: none"> <li>• The fundamental ideas behind Cloud Computing, the evolution of the paradigm, its applicability; benefits</li> <li>• The basic ideas and principles in data center design; cloud management techniques and cloud software deployment considerations;</li> <li>• Different CPU, memory and I/O virtualization techniques in cloud</li> <li>• Learn various tools used for DevOps</li> </ul>		
<p><b>Course Outcomes:</b>            Upon successful completion of the course, students will be able to  <b>CO-1:</b> Explain the core concepts of the cloud computing paradigm  <b>CO-2:</b> Discuss system, network and storage virtualization and outline their role in enabling the cloud computing system model.  <b>CO-3:</b> Understanding security architecture of cloud infrastructure  <b>CO-4:</b> Understanding basic concept of microservices, Container, Docker, Kubernetes, and DevOps</p>		
S. No.	Contents	Hours
1	<b>Introduction:</b> Objective, scope and outcome of the course.	<b>1</b>
2	<b>Cloud Computing:</b> Nutshell of cloud computing, Enabling Technology, Historical development, Vision, feature Characteristics and components of Cloud Computing. Challenges, Risks and Approaches of Migration into Cloud. Ethical Issue in Cloud Computing, Evaluating the Cloud's Business Impact and economics, Future of the cloud. Networking Support for Cloud Computing.	<b>5</b>
3	<b>Cloud Computing Architecture:</b> Cloud Reference Model, Layer and Types of Clouds, Services models, Data centre Design and interconnection Network, Architectural design of Compute and Storage Clouds. Cloud Programming and Software: Fractures of cloud programming, Parallel and distributed programming paradigms-Map Reduce, Hadoop, High level Language for Cloud. Programming of Google App engine	<b>6</b>
4	<b>Virtualization Technology:</b> Definition, Understanding and Benefits of Virtualization. Implementation Level of Virtualization, Virtualization Structure/Tools and Mechanisms, Hypervisor VMware, KVM, Xen. Virtualization of CPU, Memory, I/O Devices, Virtual Cluster and Resources Management, Virtualization of Server, Desktop, Network, and Virtualization of data-centre	<b>5</b>
5	<b>Securing the Cloud:</b> Cloud Information security fundamentals, Cloud security services, Design principles, Policy Implementation, Cloud Computing Security Challenges, Cloud Computing Security Architecture . Legal issues in cloud Computing.	<b>5</b>
6	<b>Data Security in Cloud:</b> Business Continuity and Disaster Recovery , Risk Mitigation , Understanding and Identification of Threats in Cloud, SLA-Service Level Agreements, Trust Management	<b>6</b>
7	<b>Introduction Microservices:</b> Introduction and background of Microservices, Key concept of Microservices, Monolithic Architecture, Enabling Technology, Advantages of Microservices, How to Model Microservices, basics of Microservice Communication Styles, Phases of Microservices	<b>6</b>

<b>Course Objectives:</b> As a result of successfully completing this course, students will: <ul style="list-style-type: none"> <li>• Historical Evaluation of Field, Interactive System Design</li> <li>• Understand model based design case studies</li> <li>• Empirical design and data analysis in HCI</li> </ul>		
<b>Course Outcomes:</b> Upon successful completion of the course, students will be able to <b>CO-1:</b> Understand Interactive system design, concept of usability, HCI and GUI <b>CO-2:</b> Understand model based design and evaluation <b>CO-3:</b> Understand various guidelines in HCI <b>CO-4:</b> Analyze empirical research methods in HCI <b>CO-5:</b> Understand task modeling and its analysis		
S. No.	Contents	Hours
1	Introduction: Objective, scope and outcome of the course.	1
2	Historical evolution of the field, Interactive system design, Concept of usability -definition and elaboration, HCI and software Engineering, GUI design and Aesthetics, Prototyping techniques.	2
3	Model-based Design and evaluation: Basic idea, introduction to different types of models, GOMS family of models (KLM and CMNGOMS), Fitts' law and Hick-Hyman's law, Model-based design case studies	3
4	Guidelines in HCI: Shneiderman's eight, golden rules, Norman's seven principles, Norman's model of interaction, Nielsen's ten heuristics with example of its use Heuristic evaluation, Contextual inquiry, Cognitive walkthrough	5
5	Empirical research methods in HCI: Introduction (motivation, issues, research question formulation techniques), Experiment design and data analysis (with explanation of one-way ANOVA)	6
6	Task modelling and analysis: Hierarchical task analysis (HTA), Engineering task models and Concur Task Tree (CTT), Introduction to formalism in dialog design, design using FSM (finite state machines) State charts and (classical) Petri Nets in dialog design	6
7	Introduction to CA, CA types, relevance of CA in IS design Model Human Processor (MHP), OOP- Introduction OOM- Object Oriented Modeling of User Interface Design	5
<b>Total</b>		<b>28</b>
<b>Suggested Books:</b> 1. Human-Computer Interaction, Third Edition Alan Dix, Janet Finlay, Gregory D. Abowd, Pearson Education Limited

<b>B. Tech. (Computer Science &amp; Engineering)</b>	
<b>5CS4-21: Computer Network Lab</b>	
<b>Credit: 1</b>	<b>Max. Marks: 100 ( IA:60, ETE:40 )</b>
<b>0L+0T+ 2P</b>	<b>End Term Exams: 2 Hours</b>
<b>Course Objectives:</b> As a result of successfully completing this course, students will: <ul style="list-style-type: none"> <li>To introduce the concepts of LAN, Network topologies</li> <li>To write client server based programs</li> </ul>	
<b>Course Outcomes:</b> Upon successful completion of the course, students will be able to <b>CO-1:</b> Understand fundamentals of networking <b>CO-2:</b> Implementing server and client connections that facilitate the study of networking concepts and protocols.	
<b>S. No.</b>	<b>List of Experiments</b>
1	Study of Different Type of LAN& Network Equipment.
2	Study and Verification of standard Network topologies i.e. Star, Bus, Ring etc.
3	LAN installations and Configurations.
4	Write a program to implement various types of error correcting techniques.
5	Write a program to implement various types of framing methods.
6	Write two programs in C: hello client and hello server a. The server listens for, and accepts, a single TCP connection; it reads all the data it can from that connection, and prints it to the screen; then it closes the connection b. The client connects to the server, sends the string "Hello, world!", then closes the connection
7	Write an Echo Client and Echo server using TCP to estimate the round trip time from client to the server. The server should be such that it can accept multiple connections at any given time.
8	Repeat Exercises 6 & 7 for UDP.
9	Repeat Exercise 7 with multiplexed I/O operations.
10	Simulate Bellman-Ford Routing algorithm in NS2.
11	Analysis of packets using Wireshark, Network simulations

<b>0L+0T+ 2P</b>	<b>End Term Exams: 2 Hours</b>
<p><b>Course Objectives:</b> As a result of successfully completing this course, students will:</p> <ul style="list-style-type: none"> <li>• Gain hands-on experience in implementing and applying machine learning algorithms and techniques.</li> <li>• Develop skills in preprocessing and analyzing data for machine learning tasks.</li> <li>• Acquire proficiency in using popular machine learning frameworks and libraries.</li> <li>• Learn to evaluate and optimize machine learning models through practical experimentation.</li> </ul>	
<p><b>Course Outcomes:</b> Upon successful completion of the course, students will be able to</p> <p><b>CO-1:</b> Develop practical skills in implementing and training machine learning models using various algorithms and techniques.</p> <p><b>CO-2:</b> Gain hands-on experience in preprocessing and analyzing real-world datasets for machine learning tasks.</p> <p><b>CO-3:</b> Acquire proficiency in using industry-standard tools and libraries for machine learning and AI development.</p> <p><b>CO-4:</b> Learn to evaluate model performance, interpret results, and make data-driven decisions.</p> <p><b>CO-5:</b> Apply ethical considerations and address potential biases in the design and implementation of machine learning systems.</p>	
S. No.	List of Experiments
1	Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
2	For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
3	Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample
4	Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets
6	Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
7	Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.
8	Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.
9	Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.

VI Semester		
B. Tech. (Computer Science & Engineering)		
6CS4-01: Compiler Design		
<b>Credit: 3</b>	<b>Max. Marks: 100 ( IA:30, ETE:70)</b>	
<b>3L+0T+ 0P</b>	<b>End Term Exams: 3 Hours</b>	
<b>Course Objectives:</b> As a result of successfully completing this course, students will: <ul style="list-style-type: none"> <li>• Familiar with basic ideas and the working of the compiler.</li> <li>• Learn about syntax analysis.</li> <li>• Learn about representation in the form of DAG.</li> <li>• Learn about theory knowledge of Parsing, Code generation, and optimization.</li> </ul>		
<b>Course Outcomes:</b> Upon successful completion of the course, students will be able to <b>CO-1:</b> Acquire knowledge of different phases and passes of the compiler and use compiler tools like LEX and YACC. <b>CO-2:</b> Understand the Top-Down and Bottom-up parsers and construction of LL, SLR, CLR, and LALR parsing tables. <b>CO-3:</b> Acquire knowledge about runtime data structure, like symbol table organization and different techniques. <b>CO-4:</b> Understand the target machine's run time environment, its instruction set for code generation, and techniques for code optimization.		
S. No.	Contents	Hours
1	<b>Introduction:</b> Objective, scope, and outcome of the course. Compiler, Translator, Interpreter definition, Phase of compiler, Bootstrapping, Review of Finite automata lexical analyzer, Input, Recognition of tokens, Idea about LEX: A lexical analyzer generator, Error handling.	<b>6</b>
2	<b>Review of CFG Ambiguity of grammars:</b> Introduction to parsing. Top-down parsing, LL grammars & passers error handling of LL parser, Recursive descent parsing predictive parsers, Bottom-up parsing, Shift reduce parsing, LR parsers, Construction of SLR, Conical LR & LALR parsing tables, parsing with ambiguous grammar. Operator precedence parsing, Introduction of automatic parser generator: YACC error handling in LR parsers.	<b>10</b>
3	<b>Syntax-directed translation:</b> Construction of syntax trees, S-Attributed Definition, L-attributed definitions, Top-down translation. Intermediate code forms using postfix notation, DAG, Three address code, TAC for various control structures, Representing TAC using triples and quadruples, Boolean expression, and control structures.	<b>10</b>
4	<b>Runtime environments:</b> Storage allocation, Strategies, heap management, Activation records, Accessing local and non-local names in a block structured language, Parameters passing, Symbol table organization, Data structures used in symbol tables.	<b>8</b>
5	<b>Definition of basic block control flow graphs:</b> DAG representation of basic block, Advantages of DAG, Sources of optimization, Loop optimization, Loop invariant computation, Peephole optimization, Issues in the design of code generator, A simple code generator, Code generation from DAG. Machine Independent Optimization: Idea about global data flow analysis, constant propagation, liveness analysis, and common subexpression elimination.	<b>6</b>

VI Semester		
B. Tech. (Computer Science & Engineering)		
6CS4-02: Design and Analysis of Algorithms		
<b>Credit: 3</b>	<b>Max. Marks: 100 ( IA:30, ETE:70 )</b>	
<b>3L+0T+ 0P</b>	<b>End Term Exams: 3 Hours</b>	
<b>Course Objectives:</b> As a result of successfully completing this course, students will: <ul style="list-style-type: none"> <li>• Able to analyze asymptotic runtime complexity of algorithms including formulating recurrence relations.</li> <li>• Able to understand and design algorithms using greedy strategy, divide and conquer approach, dynamic programming.</li> <li>• Demonstrate a familiarity with major algorithms and data structures and Synthesize efficient algorithms in common engineering design situations</li> </ul>		
<b>Course Outcomes:</b> Upon successful completion of the course the students will be able to <b>CO-1:</b> The ability of how to design an algorithm which solves the current problem in hand. <b>CO-2:</b> To Write efficient algorithms for given problems. <b>CO-3:</b> To focus on Deriving the complexities of any given algorithm. <b>CO-4:</b> Learning the programming of various algorithms through assignments		
S. No.	Contents	Hours
1	<b>Introduction:</b> Concept of algorithmic efficiency, run time analysis of algorithms, Asymptotic Notations. Growth of Functions, Master’s Theorem,	5
2	<b>Searching and Sorting:</b> Structure of divide-and-conquer algorithms; examples: binary search, quick sort, Strassen Matrix Multiplication; merge sort, heap sort and Analysis of divide and conquer run time, recurrence relations.	7
3	<b>Greedy Method:</b> Overview of the greedy paradigm examples of exact optimization solution: minimum cost spanning tree, approximate solutions: Knapsack problem, Kruskal’s algorithm and Prim’s algorithm for finding Minimum cost Spanning Trees, Dijkstra’s and Bellman Ford Algorithm for finding Single source shortest paths, Huffman coding, Activity Selection Problem.	8
4	<b>Dynamic programming:</b> Principles of dynamic programming. Applications: Rod cutting problem, Floyd-Warshall algorithm for all pair shortest paths. Matrix multiplication, travelling salesman Problem, Longest Common sequence, Back tracking: Overview, 8-queen problem, and Knapsack problem, Traveling Salesman problem.	7
5	<b>Branch and bound:</b> LC searching Bounding, FIFO branch and bound, LC branch and bound application: 0/1 Knapsack problem	6
6	<b>Computational Complexity:</b> Polynomial Vs non-polynomial time complexity; NP-hard and NP-complete classes, examples: Circuit Satisfiability, Vertex cover, Subset Sum problem, Randomized Algorithms, String Matching, NP-Hard and NP Completeness, Introduction to Approximation Algorithms,	7
<b>Total</b>		<b>40</b>
<b>Suggested Books:</b> <ol style="list-style-type: none"> <li>1. T .H .Cormen, C .E .Leiserson, R .L . Rivest “Introduction to Algorithms”, 3rd Ed.,PHI, 2011 ( reprint)</li> <li>2. E. Horowitz, S. VI Semester		
B. Tech. (Computer Science & Engineering)		
6CS4-03: Information Security Systems		
<b>Credit: 3</b>	<b>Max. Marks: 100 ( IA:30, ETE:70 )</b>	
<b>3L+0T+ 0P</b>	<b>End Term Exams: 3 Hours</b>	
<b>Course Objectives:</b> As a result of successfully completing this course, students will: <ul style="list-style-type: none"> <li>• Understand security attacks in a digital system.</li> <li>• Understand basic concept of cryptography</li> <li>• Understand how to protect information.</li> <li>• Use theoretical and practical knowledge in securing data transfer and authentication.</li> </ul>		
<b>Course Outcomes:</b> Upon successful completion of the course, students will be able to <b>CO-1:</b> Identify the security attacks and type of malicious programs <b>CO-2:</b> Analyze the vulnerabilities in any computing system and hence be able to design a security solution. <b>CO-3:</b> Evaluate security mechanisms using rigorous approaches by cryptography and Hash functions. <b>CO-4:</b> To understand various network security applications, IPsec, Firewall, IDS, Web Security, Email Security and Malicious software		
S. No.	Contents	Hours
1	<b>Introduction:</b> Objective, scope and outcome of the course.	1
2	<b>Security Attacks,</b> Security Services, Security Mechanisms and Principles, Security goals, Malicious software, Worms, Viruses, Trojans, Spyware, Botnets, Classical encryption techniques- substitution ciphers and transposition ciphers, cryptanalysis, stream and block ciphers.	7
3	<b>Basic of Cryptography:</b> Symmetric and asymmetric cryptography, Data Encryption standard (DES) with example, strength of DES, Design principles of block cipher, AES with structure, its transformation functions, key expansion, example and implementation. RSA cryptosystem	9
4	<b>Cryptographic Hash Function:</b> Simple hash functions, its requirements and security, Hash functions based on Cipher Block Chaining, Secure Hash Algorithm (SHA). Authentication and key establishment, Message Authentication Codes (MACs), digital signatures. <b>Security Vulnerabilities:</b> DoS attacks, Buffer Overflow, Race Conditions, Access Control Problems, Spoofing and Sniffing attacks.	9
5	<b>Internet Security:</b> TCP/IP Security, Secure Sockets Layer (SSL), Transport Layer Security (TLS), HTTPS, Secure Shell (SSH), IPsec, Email Security, DNS Security, Authentication Protocols	7
6	<b>Web Security:</b> Phishing attack, SQL Injection, Securing databases and database access, Cross Site Scripting Attacks, Cookies, Session Hijacking, E-commerce security <b>System Security:</b> Firewalls, Types: Packet filter (stateless, stateful), Application layer proxies, Firewall Location and Configurations, Intruders, Intrusion Detection System.	7
<b>Total</b>		<b>40</b>

VI Semester		
B. Tech. (Computer Science & Engineering)		
6CS5-11: Artificial Intelligence		
<b>Credit:2</b>	<b>Max. Marks: 100 ( IA:30, ETE:70 )</b>	
<b>2L+0T+ 0P</b>	<b>End Term Exams: 3 Hours</b>	
<b>Course Objectives:</b> As a result of successfully completing this course, students will: <ul style="list-style-type: none"> <li>• Able to Understand the foundations of Artificial Intelligence in today's environment</li> <li>• To understand the concepts of state space representation, exhaustive search, heuristic search together with the time and space complexities</li> <li>• To understand the applications of AI, such as game playing, theorem proving, and machine learning.</li> </ul>		
<b>Course Outcomes:</b> Upon successful completion of the course, students will be able to <b>CO-1:</b> Understand the core concepts of artificial intelligence and applications <b>CO-2:</b> Apply knowledge representation with artificial intelligence using FOL and Predicate logic <b>CO-3:</b> Possess the ability to apply AI techniques to solve problems of game playing, and machine learning. <b>CO-4:</b> Possess the skill for representing knowledge using the appropriate technique for a given problem.		
S. No.	Contents	Hours
1	Introduction: Objective, scope and outcome of the course.	1
2	<b>Introduction to AI and Intelligent agent:</b> Different Approach of AI, Problem Solving : Solving Problems by Searching, Uninformed search, BFS, DFS, Iterative deepening, Bi directional search, Hill climbing, Informed search techniques: heuristic, Greedy search, A* search, AO* search, constraint satisfaction problems.	3
3	<b>Game Playing:</b> Minimax, alpha-beta pruning, jug problem, chess problem, tiles problem	6
4	<b>Knowledge and Reasoning:</b> Building a Knowledge Base: Propositional logic, first order logic, situation calculus. Theorem Proving in First Order Logic. Planning, partial order planning. Uncertain Knowledge and Reasoning, Probabilities, Bayesian Networks.	6
5	<b>Learning:</b> Overview of different forms of learning, Supervised base learning: Learning Decision Trees, SVM, Unsupervised based learning, Market Basket Analysis, Neural Networks.	7
6	<b>Introduction to Natural Language Processing:</b> Different issue involved in NLP, Expert System, Robotics.	5
<b>Total</b>		<b>28</b>
<b>Suggested Books:</b> <ol style="list-style-type: none"> <li>1. Stuart Russell and Peter Norvig, Artificial Intelligence: A Modern Approach, 2nd edition.</li> <li>2. Herbert A. Simon, The Sciences of the Artificial, MIT Press, 3rd Edition (3rd printing), 1999.</li> </ol>		

VI Semester		
B. Tech. (Computer Science & Engineering)		
6CS5-12: Big Data Analytics		
<b>Credit:2</b>	<b>Max. Marks: 100 ( IA:30, ETE:70 )</b>	
<b>2L+0T+ 0P</b>	<b>End Term Exams: 3 Hours</b>	
<b>Course Objectives:</b> As a result of successfully completing this course, students will: <ul style="list-style-type: none"> <li>• To understand the need of Big Data, challenges and different analytical architectures</li> <li>• Installation and understanding of Hadoop Architecture and its ecosystems</li> <li>• Processing of Big Data with Advanced architectures like Pig, Hive.</li> </ul>		
<b>Course Outcomes:</b> Upon successful completion of the course, students will be able to <b>CO-1:</b> Discuss the challenges and their solutions in Big Data <b>CO-2:</b> Understand and work on Hadoop Framework and eco systems. <b>CO-3:</b> Analyze the Big Data using Map-reduce programming in Hadoop		
S. No.	Contents	Hours
1	<b>Introduction:</b> Objective, scope and outcome of the course.	<b>1</b>
2	<b>Introduction to Big Data:</b> Big data features and challenges, Problems with Traditional Large-Scale System , Sources of Big Data, 3 V's of Big Data, Types of Data. <b>Working with Big Data:</b> Google File System. Hadoop Distributed File System (HDFS) - Building blocks of Hadoop (Namenode. Data node. Secondary Namenode. Job Tracker. Task Tracker), Introducing and Configuring Hadoop cluster (Local. Pseudo- distributed mode, Fully Distributed mode). Configuring XML files.	<b>6</b>
3	<b>Writing MapReduce Programs:</b> A Weather Dataset. Understanding Hadoop API for MapReduce Framework (Old and New). Basic programs of Hadoop MapReduce: Driver code. Mapper code, Reducer code. Record Reader, Combiner, Partitioner.	<b>7</b>
4	<b>Hadoop I/O:</b> The Writable Interface. Writable Comparable and comparators. Writable Classes: Writable wrappers for Java primitives. Text. Bytes Writable. Null Writable, Object Writable and Generic Writable. Writable collections. Implementing a Custom Writable: Implementing a Raw Comparator for speed, Custom comparators.	<b>7</b>
5	<b>Pig:</b> Hadoop Programming Made Easier Admiring the Pig Architecture, Going with the Pig Latin Application Flow. Working through the ABCs of Pig Latin. Evaluating Local and Distributed Modes of Running Pig Scripts, Checking out the Pig Script Interfaces, Scripting with Pig Latin.	<b>7</b>
<b>Total</b>		<b>28</b>
<b>Suggested Books:</b> <ol style="list-style-type: none"> <li>1. Mike Frampton, “Mastering Apache Spark”, Packt Publishing, 2015.</li> <li>2. Natural language processing in Prolog by Gazdar, &amp; Mellish, Addison-Wesley</li> </ol>		

VI Semester	
B. Tech. (Computer Science & Engineering)	
6CS4-21: Design and Analysis of Algorithms Lab	
<b>Credit: 1</b>	<b>Max. Marks: 100 ( IA:60, ETE:40 )</b>
<b>0L+0T+ 2P</b>	<b>End Term Exams: 2 Hours</b>
<p><b>Course Objectives:</b> As a result of successfully completing this course, students will:</p> <ul style="list-style-type: none"> <li>• Able to understand a solid background in the design and analysis of the major classes of algorithms</li> <li>• Able to develop their own versions for a given computational task and to compare and contrast their performance</li> </ul>	
<p><b>Course Outcomes:</b> Upon successful completion of the course, students will be able to</p> <p><b>CO-1:</b> Design algorithms using divide and conquer, greedy and dynamic programming.</p> <p><b>CO-2:</b> Execute sorting algorithms such as sorting, graph related and combinatorial algorithm in a high level language.</p> <p><b>CO-3:</b> Analyze the performance of merge sort and quick sort algorithms using divide and conquer technique.</p> <p><b>CO-4:</b> Apply the dynamic programming technique to solve real world problems such as knapsack and TSP</p>	
S. No.	List of Experiments
1	Sort a given set of elements using the Quicksort method and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n. The elements can be read from a file or can be generated using the random number generator.
2	Implement a parallelized Merge Sort algorithm to sort a given set of elements and determine the time required to sort the elements. Repeat the experiment for different values of n, the number of elements in the list to be sorted and plot a graph of the time taken versus n. The elements can be read from a file or can be generated using the random number generator.
3	a. Obtain the Topological ordering of vertices in a given digraph. b. Compute the transitive closure of a given directed graph using Warshall's algorithm.
4	Implement 0/1 Knapsack problem using Dynamic Programming.
5	From a given vertex in a weighted connected graph, find shortest paths to other vertices using Dijkstra's algorithm.
6	Find Minimum Cost Spanning Tree of a given undirected graph using Kruskal's algorithm.
7	a. Print all the nodes reachable from a given starting node in a digraph using BFS method. b. Check whether a given graph is connected or not using DFS method.
8	Find Minimum Cost Spanning Tree of a given undirected graph using Prim's algorithm.
<p><b>Suggested Books:</b></p> <ol style="list-style-type: none"> <li>1. T .H .Cormen, C .E .Leiserson, R .L . Rivest “Introduction to Algorithms”, 3rd Ed.,PHI, 2011 (reprint)</li> <li>2. E. <b>VI Semester</b>	
<b>B. Tech. (Computer Science &amp; Engineering)</b>	
<b>6CS4-22: Information Security Systems Lab</b>	
<b>Credit: 1</b>	<b>Max. Marks: 100 ( IA:60, ETE:40 )</b>
<b>0L+0T+ 2P</b>	<b>End Term Exams: 2 Hours</b>
<b>Course Objectives:</b> As a result of successfully completing this course, students will:	
<ul style="list-style-type: none"> <li>Utilize the different open source tools for network security and analysis</li> </ul>	
<b>Course Outcomes:</b>	
Upon successful completion of the course, students will be able to	
<b>CO-1:</b> Apply programming concepts to simulate various security attacks	
<b>CO-2:</b> Apply the cryptographic algorithms for data communication	
<b>CO-3:</b> Demonstrate network monitoring and intrusion detection system using network security tool.	
<b>CO-4:</b> Secure practices to handle web vulnerabilities	
<b>S. No.</b>	<b>List of Experiments</b>
1	Implement the following Attacks in Java/Python: a) Dictionary Attack b) Brute Force Attack
2	Develop and implement a java interface for encryption and decryption algorithms i.e., AES, MD5 and RSA algorithms
3	Installation of Network monitoring and analysis tools like Wire shark, tcpdump, Nmap etc and observe data transferred in client server communication using UDP/TCP
4	Demonstrate intrusion detection and prevention system using any tool (snort, Suricata, etc).
5	Implement the Diffie-Hellman Key Exchange mechanism using HTML and JavaScript.
6	Study Programming vulnerability such as buffer overflow, Cross Site Scripting (XSS) and its countermeasures
7	Understand security issues through exploiting vulnerabilities in the Damm Web Application Vulnerabilities (DWAV) or Web Goat tools
8	Find and analyze vulnerabilities of target system through vulnerability Scanners like Nessus
9	Analyze Trojan wrapping by combining the genuine application with a vulnerable program using IEXPRESS 2.0 tool
10	Develop secure coding practices to handle Code Injection Vulnerabilities such as SQL Injection, PHP Injection and Command Injection

<b>B. Tech. (Computer Science &amp; Engineering)</b>	
<b>6CS4-23: Digital Image Processing Lab</b>	
<b>Credit: 1</b>	<b>Max. Marks: 100 ( IA:60, ETE:40 )</b>
<b>0L+0T+ 2P</b>	<b>End Term Exams: 2 Hours</b>
<p><b>Course Objectives:</b>            As a result of successfully completing this course, students will:</p> <ul style="list-style-type: none"> <li>• To introduce the concepts of image processing and basic analytical methods to be used in image processing.</li> <li>• To familiarize students with image enhancement and restoration techniques</li> <li>• To explain different image compression techniques. To introduce segmentation and morphological processing techniques.</li> </ul>	
<p><b>Course Outcomes:</b>            Upon successful completion of the course, students will be able to</p> <p><b>CO-1:</b> Review the fundamental concepts of a digital image processing system.  <b>CO-2:</b> Analyze images in geometric transforms with image rotation, scaling, and translation.  <b>CO-3:</b> Evaluate the techniques for image enhancement and image restoration.  <b>CO-4:</b> Categorize various compression techniques and Interpret Image compression standards  <b>CO-5:</b> Interpret image segmentation and representation techniques.</p>	
S. No.	List of Experiments
1	Point-to-point transformation. This laboratory experiment provides for thresholding an image and the evaluation of its histogram. Histogram equalization. This experiment illustrates the relationship among the intensities (gray levels) of an image and its histogram.
2	Geometric transformations. This experiment shows image rotation, scaling, and translation. Two-dimensional Fourier transform
3	Linear filtering using convolution. Highly selective filters.
4	Ideal filters in the frequency domain. Non Linear filtering using convolutional masks. Edge detection. This experiment enables students to understand the concept of edge detectors and their operation in noisy images.
5	Morphological operations: This experiment is intended so students can appreciate the effect of morphological operations using a small structuring element on simple binary images. The operations that can be performed are erosion, dilation, opening, closing, open-close, close-open.
<p><b>Suggested Books:</b></p> <ol style="list-style-type: none"> <li>1. Digital Image Processing, Rafea l C. Gonzalez, Richard E. Woods, Second Edition, Pearson Education/PHI</li> <li>2. Image Processing, Analysis, and Machine Vision, Milan Sonka, Vaclav Hlavac and Roger Boyle, Second Edition, Thomson Learning.</li> <li>3. Digital Image Processing using Matlab, Rafeal C. Gonzalez, Richard E. Woods, Steven L. Eddins, Pearson Education.</li> </ol>	

<b>VI Semester</b>	
<b>B. Tech. (Computer Science &amp; Engineering)</b>	
<b>6CS7-50: Innovation and Design Thinking Hands-on Project</b>	
<b>Credit: 2</b>	<b>Max. Marks: 100 ( IA:60, ETE:40 )</b>
<b>0L+0T+3P</b>	<b>Mode of evaluation: Report and presentation</b>
<p><b>Course Objectives:</b>          As a result of successfully completing this course, students will:</p> <ul style="list-style-type: none"> <li>• Learn about the National Innovation and Startup Policy (NISP) of Govt. of India.</li> <li>• Learn how to ideate, prototype and Iterate solutions.</li> <li>• Learn about applying Design Thinking Tools and Approaches for Right Problem Identification and Solution Development.</li> <li>• Learn about Business Plan Development.</li> <li>• Learn about Legal Structures and Ethical Steps in Establishing Startups.</li> <li>• Able to design and develop a Prototype.</li> <li>• Students will be able to pitch their idea.</li> <li>• Will be able to demonstrate their innovative and design thinking capabilities using mock-up models.</li> </ul>	
<p><b>Course Outcomes:</b>          Upon successful completion of the course, students will be able to</p> <p><b>CO-1:</b> learn about opportunities and challenges for startup and incubation.  <b>CO-2:</b> Students will be able to identify an Opportunity from a Problem using design thinking.  <b>CO-3:</b> Students will be able to frame Product and service ideas.  <b>CO-4:</b> Learn and implement Design Thinking Process.  <b>CO-5:</b> Students will be able to design and develop a Prototype.  <b>CO-6:</b> Students will be able to prepare documentation and pitch their idea.</p>	
<b>exp. No.</b>	<b>Contents</b>
1	National Innovation and Startup Policy (NISP) and Legal Structures and Ethical Steps in Establishing Startups, Generation and Management of IP at the Early Stage of Innovation and Startup Development, IPR and IPR policies.
2	Design Thinking, Process of Design Thinking, Empathy, Define, Ideate, Prototype, Testing.
3	Understanding Technology Readiness Level (TRL), Manufacturing Readiness Level (MRL) and Investment Readiness Level (IRL) Stages & Implications in Innovation Development
4	<p>Capstone Project:</p> <p>Students in the group of 3 to 5 students must prepare a project idea using the design thinking process under the mentorship of the Institute innovation ambassador (For the Institute having IIC cells) or faculty member (For the Institute not having IIC cells). Students must submit capstone project report containing various ideas learned in experiment no 1-3 and their implementation or usage in capstone project to IIC cell along with presentation.</p>
<p><b>Assessment or Evaluation:</b>          Students need to submit capstone project report to the Institute innovation council (For the Institute having IIC cells) or the head of department (For the Institute not having IIC cells) containing step by step approach to the project based on design thinking methodology along with the final presentation to IIC Cell (For the Institute having IIC cells) or Head of department (For the Institute not having IIC cells).</p>
